

おいしいって、生きること。

Q·B·B

We are QBB, the top brand for processed cheese.

Cheese is healthy source of the protein that is an essential building block for the human body.

Cheese is also a great source of the calcium keeps our bones strong and the vitamin A that promotes healthy development.

Make cheese a part of your daily life.

For breakfast, with bread, or in a salad, eating cheese is the best way to lead a healthy, nutritious life.

Cheese is an essential part of life. And, it's also delicious.

That's the beauty of cheese.

Hirokazu Miyake
Chairman of the Board

Hiroyasu Tsukamoto
President & CEO

Quality for our Customers

Since its founding in 1948, Rokko Butter Co., Ltd. has brought many products to the market, including processed cheese and cheese desserts.

Our product brand QBB stands for Quality's Best & Beautiful, and represents our promise to customers: To provide the highest quality and most delicious-tasting products.

We value teamwork as the way to ensure our ability to offer customers the best quality and beautifully delicious products.

We apply our years of experience and know-how towards creating new and wonderful products for our customers. We continuously pursue better quality and taste to contribute to the health and happiness of our consumers.

This is our mission and our never-ending pursuit, no matter the changing times.

As a development-oriented company committed to proposing new food culture, we will continue challenging ourselves to create new value.

We proactively adopt new workstyles and new approaches to develop and launch new products that look beyond the changing times.

We take a global perspective to promoting delicious food culture to people around the world. We engage with local communities to create a global environment that we can leave for future generations.

Creating a healthy and happy society for all.

More than ever, Rokko Butter is committed to creating a delicious future.

	November	Established QBB ASIA COMPANY LIMITED, a manufacturing and sales company for cheese products, in Vietnam	

Manufacturing

Committed to the highest quality while ensuring safety and peace of mind

Using only select natural cheese as raw materials, we engage in manufacturing processes that incorporate advanced technology and are subject to strict inspections. These processes ensure we provide our customers safe, high quality processed cheese that our customers can depend on. In 2019, we launched operations at our Kobe Factory. This factory is equipped with advanced manufacturing facilities and boasts a production structure capable of responding to rapidly growing market while achieving an even higher level of quality.

Kobe Factory

Launching operations in April 2019, the Kobe Factory sits on a 51,540.94m² lot. The factory has a total floor area of 47,394m² and boasts a production capacity of 40,000t/year. The Kobe Factory represents a dramatic increase in production capacity, quality control, and efficiency thanks to an optimal production line layout, advanced manufacturing equipment, centralized information management, an advanced quality control structure, and the adoption of automation for factory logistics.

Manufacturing Process

1 The natural cheese we use for raw materials is limited to products that clear our internal inspection standards.

2 During the melting sterilization process, natural cheese is heated to cause emulsification, after which the latest equipment is used to fill and wrap the product in a clean room.

3 We use advanced equipment to conduct filling and packaging in a clean environment.

4

We install image recognition cameras, detection sensors, and X-ray sensors to check the cheese.

Central Control Room

All factory operations, including production progress, machinery operating status, and energy consumption are monitored continuously.

5

Quality Control

Strict Quality Control

To ensure product quality and safety, in addition to standard hygiene management at our factories, including manufacturing facility and equipment inspections, worker education, and various manufacturing process, raw material, and product inspections, we also conduct hygiene management conforming to HACCP standards. As part of additional safety and security measures, we employ a quality assurance system based on FSSC22000, the international certification standard for food safety management systems, to improve our product quality and services, and provide customers with satisfying products.

At the factory, we dismantle processing kettles and filler machinery daily for cleaning and sterilization to maintain constant cleanliness. Our factories also feature airflow design so that external air is taken in through filters and existing air is ventilated outside. This prevents entry by dust or insects. Prior to entering the worksite, employees are required to change into designated work clothing and wear work boots, a hat, and a mask. Employees also use lint rollers for full-body dust removal and are required to wash their hands (disinfecting). Furthermore, workers are also prohibited from bringing in metallic objects and accessories as part of measures to prevent foreign object contamination due to human error. Reinforcing these systems enable us to provide our customers with safe and reliable products.

Kobe Factory

Nagano Factory

	FSSC22000	
Certified factory	Kobe Factory	Nagano Factory
Certification number	JQA-FC0218	JQA-FC0166
Scope of certified activities	Design, development, and manufacturing of processed cheese, cheese food, dairy food products, natural cheese and processed oil and fat product	Design, development, and manufacturing of processed cheese and dairy food products

Research & Development

Pursuing the potential of cheese to create healthy, happy food experiences.

Since our founding, we have worked to bring cheese to more and more Japanese consumers. Through this continuous effort, we have achieved numerous firsts on both the global stage and the Japanese market. As a development-oriented company that embraces the spirit of taking on new challenges, we continuously work towards creating and offering products that exceed customer expectations. We strive to maintain the delicious taste and quality we have cultivated over the years. At the same time, we work continuously to develop new products that further expand on the vast potential of processed cheese.

Overseas market

We began major export activities in 2017 and today continue to expand sales with a focus on Southeast Asia.

Our goal is to create a healthy and happy for all through our products and business activities.

QBB is the abbreviation for Quality's Best & Beautiful, which expresses our desire to provide the highest quality and delicious-tasting products.

Q·B·B

EMINA represents our desire to make everyone smile with cheese (in Japanese, "E" = smile and "MINA" = everyone).

Quality's Best & Beautiful

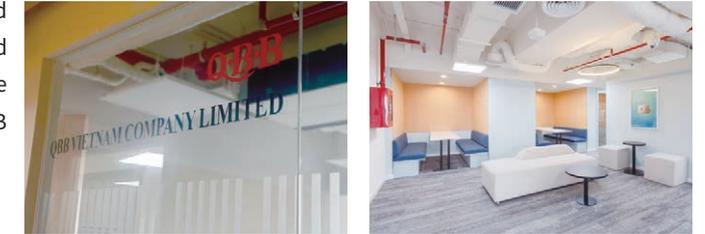

Our business in Indonesia

We established PT EMINA CHEESE INDONESIA as a joint venture with Mitsubishi Corporation in Indonesia. This factory is compliant with the hygiene and quality control structure standards we apply in Japan. The population of Indonesia is the fourth largest in the world and is approximately 90% Muslim. Because of this, we have obtained Halal certification, which certifies that our production process is compatible with Muslim teachings.

Our business in Vietnam

We established QBB VIETNAM COMPANY LIMITED as a subsidiary company of Rokko Butter Co., Ltd. in May 2023 in Vietnam. QBB VIETNAM COMPANY LIMITED has started its business as an import and sales company to expand our products. Our most popular product in Vietnam is "Cheese Dessert" which is a great combination with cream cheese and some flavor such as fruits, vanilla and nuts. We aim to support the Vietnamese health and bring happiness with QBB cheese products.

Japan's leading manufacturer for processed cheese

Baby Cheese is the No. 1 brand for bite-sized cheese

With over 200 million units sold annually, our Baby Cheese line of products boasts the No. 1 market share in Japan for bite-sized cheese. This equates to more than one packet (4 pieces) sold for each person in Japan. These figures represent the trust customers have in our products, and a source of pride for us at Rokko Butter. (Source: INTAGE SCI (ages 15 to 69, including Okinawa) Bite-Sized Cheese (4-piece) Market, Market Revenue Share for January to December 2021)

A legacy of "world's first" and "Japan's first"

We developed the world's first Stick cheese in 1960. And in 1971, we were the first in Japan to develop individually wrapped sliced cheese. Since then, we have continued to develop numerous unique products. One of our greatest strengths is in our ability to predict market needs and engage in creative product planning and development. New tastes, new textures, new ingredients, new ways of eating, and new forms of packaging. Throughout our history and into the future, we have always and will continue to offer creative, new products as part of our continuous pursuit of originality and innovation.
